RESEARCH
INTERESTS

I am a Ph.D. student in animal science at Virginia Tech. My research interests focus on incorporating statistics, machine learning, and bioinformatics into the study of animal and plant genetics in the omics era. I am also interested in the application of computer vision systems for high-throughput phenotyping in precision agriculture.

CURRENT
RESEARCH
PROJECTS**Quantitative Genetics**

- Complex trait prediction using metabolomics and hyperspectral image data in rice
- Rice phenotypic plasticity analysis using a random regression model

Precision Livestock Farming

- Estimate dairy cow body weight and body condition score via automated computer vision systems
